## Wet Application Instructions

You will need a spray bottle 500ml-1ltr put .5% dishwashing liquid and the rest of the water into it.

Obviously the surface must be clean, lay the graphics face down, you should see the words of the backing paper, now carefully peel away the backing sheets, this will expose the adhesive, spray this surface and get it onto the required area, quickly but without panic, it should slide around for you, so get two of the edges into place, then squeegee from the centre outwards, be reasonably firm with it, leave removing the carrier tape until the next day if on glass, for all other surfaces leave 2 hours or as long as possible for best results. The edges may need a bit of a squeegee.
